# WEATHER OF CONCERN

## Weather of Concern

### **Northern California Heat:**

- Near record high temperatures today. Areas of smoke and haze are expected to continue to degrade air quality in the region.

### **Southern California Heat:**

- Excessive Heat Warnings are in effect for portions of several Southern counties until 08/09/18 at 2200 hours.
- Hot daytime temperatures with very warm overnight lows will continue to bring heat impacts across the southwest desert areas through the weekend.

### **Critical Fire Weather Conditions:**

- High Risk Thursday afternoon through Friday night for NE CA, Sacramento Valley-Foothills, Northern Sierra and Far Eastside due to gusty winds and low humidity.
- Enhanced fire weather danger for portions of the Coastal Range, Northern Sierra, & Northern Sacramento Valley due to increased wind & dry conditions through Saturday.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

A hot dome of high pressure will set up over the western third of the country the next couple of days. At the same time, a deep low pressure system will be found off the coast. This low pressure system will provide a break-down of the ridge critical fire weather pattern Thursday night through Saturday. Pre-frontal, generally southerly, winds from the Shasta and Sacramento Valley's eastward will increase today with peak gusts between 20-25 mph. The southerly flow will increase even more Thursday and Friday with peak gusts between 25-35 mph. Peak strengths will occur Friday into Friday night due to a dry cold frontal passage and can't rule out gusts to around 40 mph favoring the Shasta Valley, Modoc and Lassen counties. The majority of the coastal mountains and Delta Region will experience a broad westerly flow during this period. Humidity values will be low except for near the coast. Expect single digits and teens with poor to very poor recoveries at night. Due to the increased transport wind, more sunshine should reach the surface aiding the mixing process and offsetting the slight cool down expected with the cold frontal passage. A few of the models are showing weak signatures of high based showers and thunderstorms across portions of the region on Friday. Some residual troughing is expected Saturday through Monday. Temperatures should eventually warm back to above normal status area-wide and wind speeds decline some. Some higher level moisture will work its way northward from the tropical systems currently off the Baja as well as Monsoon moisture creeping up the Sierra.

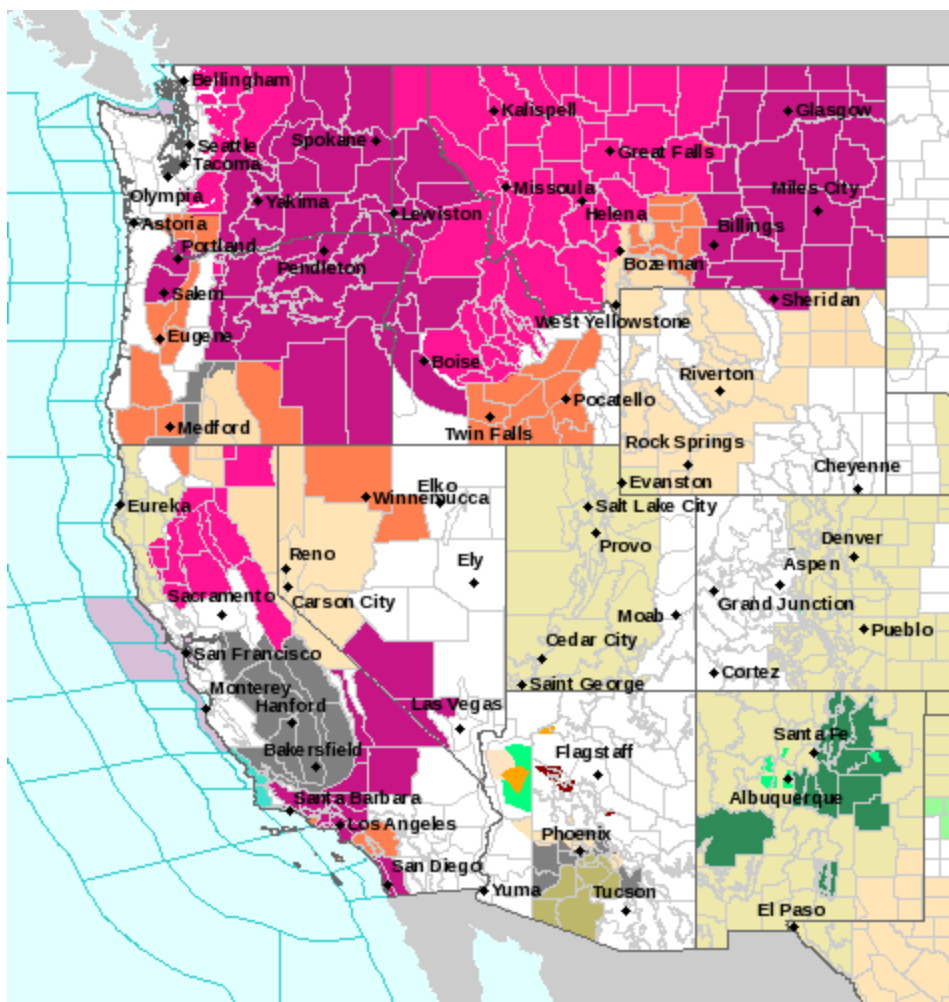

## **SOUTHERN CALIFORNIA**

\*\*\*Isolated wet thunderstorms returning to a few areas later this week\*\*\*

Expect temperatures to remain around 10 degrees above normal through the end of the week with highs of 100-105 in the valleys and lower foothills. A slow spreading of monsoonal moisture is expected over Southern California which will lead to a bit higher RH across areas from Los Angeles County south and eastward. Isolated wet storms will be possible each afternoon across the deserts south of I-15 and the east sides of the San Bernardino and Cleveland National Forests. This weekend, temperatures will moderate a bit and some return of sea breezes can be expected. Isolated storms may spread into the Sierras over the weekend.
